A: You need to go back up and use grep to search the whole file for the match: `grep -oP 'BRL\s+ [A-Za-z0-9._]{1,}' filename`
Since grep doesn't support look behind, you have to use two separate commands, first use grep to create a sed substitution for this expression: `grep -oP 'BRL\s+ [A-Za-z0-9._]{1,}' filename | sed 's/\(.*\) \(BRL[^\s]*\) \(\s+ [A-Za-z0-9._]{1,}\) /\1.\2.\3/g'`
Then use sed to turn that substitution back into a regular expression: `sed -E 's/(.*) \(BRL[^\s]*\) \(\s+ [A-Za-z0-9._]{1,}\) /\1.\2.\3/g' filename` Notes: re-use of the regex -E flag (I've been slowly abandoning these things because they are inefficient and add complexity) \- This saves typing for the sed command, instead of having to type `(.*) \(BRL[^\s]*\) \(\s+ [A-Za-z0-9._]{1,}\)`, which is kind of annoying -this regex that uses a series of groups. The `\s+` after the `\(BRL)` means that one or more whitespace characters should come after it, but what's inside the group `([A-Za-z0-9._]{1,})` means that one or more A-Za-z0-9 character is allowed. See here: The final round of preparations for July's international student outreach activity kicks off on Wednesday, with tour guides being hired to teach our interns a bit of Chinese. Sure, we're known for teaching about more than just the United States — but we're not as cool as China. You can see a little of what we're missing by reading our nine most popular posts on the site in 2009. Here are a few more posts that f678ea9f9e
