After you have launched the video editor, the video will be displayed on the left panel (as below) Enter the serial number (which you can also get by registering the software) in the box to the right. After you do that, you can close the video window and continue to the next step. From there, we will create a new project. If you have not done so yet, you need to install the Element plugin. The next steps will be carried out with the help of this plugin. 3.1.2. Install the plugin First, you will need to open the manager of the editor on the left. In the right-hand panel, go to Elements -> Add-Ons -> User Plugins -> Video Creators (under the new section). After that, click the button and install the plugin. You can do this in this order because the plugin will be not be activated automatically. When the plugin has been installed, you need to go back to the main video editor, and then set the next parameters: At the same time, you need to change the function name, and add your company logo as a parameter in the menu on the bottom. After you do that, press the OK button and go to the next step. 3.2. Add keyframes It is better to add the keyframes using the integrated Timeline. To do this, you need to open the Timeline and enable the "Add Keyframes" button (this will be located on the right upper corner of the timeline). When you have done that, you will need to enter the number of frames you want, and add the frames at the right position. You can also mark them and then use the reorder panel to move them to the position you want. 3.3. Export When you have added all the keyframes and you have done all the necessary changes, you need to press the Export button. In this step, you need to choose between the best formats to export the project. In our case, we will work with the MOV (Multimedia Object) format, which is the standard on Youtube. 3.4. Share When you are ready to share the project, you need to share it with the necessary people. The easiest way to do this is to go to the right-hand panel, go to Files -> Import Files -> Google Drive. Enter the file to share and 82157476af
