Almost 100 million have signed up for the new iPhone 6, but most of those are in China where many phones have already been ordered. The US has not been so enthusiastic about the phone, with just over 15 million having signed up. But most of those people live in urban areas where phones are easily obtained. Last night, Apple announced that they were moving up the release of the iPhone 6 to 1 September and that they had increased production. iPhone 6 launch The phone will be launched in France and China on 16 September. iPhone 6 But just over 10 million of those who have signed up so far live in the US and the majority of those are in the northern states, so it is safe to assume that a lot of the iPhone 6 will go to those states before the official launch on 16 September. So far we have found three customers from the state of Maryland (Andrew, Joseph and Robert) who are all ordering an iPhone 6. If you live in the US and have signed up you can check out our database to see whether you are in the lucky few to be in the first group of people to buy the phone. If you know someone who lives in the US, we would be interested to hear whether they are planning to order the phone. Q: ASP.NET MVC2: How to define an action that performs other actions on the model I have an ASP.NET MVC2 controller that has an action that gets the current user by reading their credentials from the HttpContext.Current.User.Identity.Name. What is the best way to define another action that reads from the same context, but reads a different user property? The code should be able to be shared by multiple controllers. A: You can define an action filter that can intercept a request. I would consider using a custom AuthorizeAttribute to do the work. This allows you to: Read your user properties (i.e. if they are logged in, what groups they belong to) Return a custom result that you have defined If this becomes more complicated, you can also do it by writing a custom ActionInvoker. I do not recommend this approach, but if you have complex properties that you need to process, it is possible. Q: How to start testing a full-featured prototype (larger than simple one-off 82157476af
